

Why should Federal Acquisition Professionals seek AI Training?

In today's evolving federal landscape, Artificial Intelligence (AI) is transforming how agencies operate, from streamlining procurement processes to enhancing decision-making capabilities. For acquisition professionals, **understanding AI** is becoming an essential part of navigating the complexities of modern federal contracting.

SoKat, which has a proven track record of delivering award-winning AI solutions and providing AI education to federal agencies since 2017, has developed an AI training program to empower acquisition professionals to achieve Leadership in Ethical AI Development. This program, called SoKat LEAD, empowers **acquisition teams to leverage AI to attain mission critical goals** by:

- **Harnessing the Power of AI in Procurement.** AI offers federal acquisition teams the ability to improve efficiency, accuracy, and responsiveness. From automating contract reviews to data-driven decision-making, AI is reshaping the way acquisition teams work.
- **Enhancing Expertise in a Growing Field.** As AI continues to integrate into federal operations, acquisition professionals can benefit from having a deep understanding of how to evaluate, procure, and manage these technologies.
- **Ensuring Ethical and Compliant Use of AI.** Federal acquisitions require strict adherence to legal, regulatory, and ethical guidelines. Understanding how AI fits within these frameworks is key to making informed, responsible decisions.

The SoKat LEAD program is modeled after the successful "Fundamentals of AI" training session we provided for the **VA's Veterans Experience Office** staff in 2023. References are available upon request.

Why Choose SoKat as Your Trusted AI Training Partner?

1. **World-Class Expertise in AI.**

SoKat brings together **leading AI experts and faculty from Johns Hopkins University** to deliver the most current and accurate knowledge. Our academic foundation ensures that your team is learning from instructors who provide insights grounded in the latest research and real-world applications.

2. **Tailored for Federal Acquisition.**

Unlike generic AI training programs, SoKat's approach is **specifically designed for federal acquisition professionals**. We focus on the practical application of AI in procurement, contract management, and compliance, providing real-world tools that your team can immediately put to use, enabled by our successful past performance in delivering AI projects for federal agencies.

3. Proven Success Across Federal Agencies.

SoKat has a long track record of delivering impactful AI solutions to federal agencies, including the VA, CMS, and OCC. From building the first GPT-based AI model to predict suicide ideation at the VA, to serving as an AI advisor to CMS, to standing up the first AI Solutions Lab at OCC, we have **consistently delivered results that improve efficiency and outcomes** in a transparent and ethical way, in complex government environments.

4. Ethical and Responsible AI.

As AI becomes more prevalent in government operations, it is essential to understand its ethical implications and compliance requirements. SoKat’s training includes **ethical frameworks and risk management strategies**, ensuring your team is fully equipped to make responsible AI decisions that align with federal standards.

How to Prepare Your Team for Success for the Future of Acquisitions

Investing in AI training now prepares your acquisition team to:

- Lead AI integration in procurement, boosting efficiency and accuracy.
- Stay ahead of evolving regulations and compliance requirements.
- Build a future-ready workforce with ethical, technical, and strategic AI expertise.

At SoKat, your success is our success. As leaders in AI education and implementation, SoKat will empower your team with the knowledge and tools needed to navigate the growing impact of AI on procurement. With our track record of success, world-class academic expertise, and commitment to ethical AI, SoKat is the trusted partner your team needs to excel in the evolving landscape of federal acquisition.
